

Fisher Scientific Pay Open Invoice

Select Download Format:

Halophilous and anaerobic, they grow while soluble amino acids and secondary lipid donors and degrade alcohols. They are
diverse in morphology, ranging from coccoid to filamentous. They are also highly resistant to desiccation and can survive for years
in a dormant state. They are also highly resistant to heat and cold, and can survive at temperatures as low as -100°C and as high as 120°C.
